

M501 Headset

A general-purpose headset that is designed to plug directly into most modern business phones, without the need for an amplifier. Sound quality is excellent, and the adjustable headband and microphone boom help with a comfortable fit. The quick disconnect feature allows the user to walk away from the phone without taking the headset off.

M501

Headset complete with curly cord to plug directly into most modern business telephones.

M501/M12S

The combination of the M501 headset and the Plantronics M12S headset amplifier. This combination is needed for some telephones, especially older business phones, or for noisy environments where more control of both incoming and outgoing volume is needed. The amplifier also acts as a switchbox between the normal handset and the headset.

M501/IQ333S

The combination of the M501 headset and the Interquartz IQ333S headset telephone. The IQ333S has a separate headset socket, and calls can be answered at the touch of a button.

M501/GLS201

The combination of the M501 headset and the GLS201 Headset/Handset Switch. This combination is for phones that will accept the M501 direct-connect headset, but do not have a separate headset socket. The switch enables the normal handset to be plugged in at the same time, and for the user to switch between headset and handset.

Key Features

- Light and comfortable for all day use
- Over the head style/Monaural
- Adjustable headband
- Leatherette earpad
- Easy disconnection with Quick Disconnect cord
- Two-year warranty

Technical Specifications
