

GN 2000

Designed to perform. Built to last.

The GN 2000 Series contact centre headsets feature superb call clarity. Tested to withstand rough handling and comfortable enough to wear all day. Best of all, GN 2000 Series offers far more than you would expect from an affordable headset:

- Optimised for contact-centre use
- Day-after-day durability due to robust design
- Large ear-cushions for extra comfort
- Choice of noise-cancelling microphone or SoundTube boom arm
- Mono or duo sound

Built to last, the GN 2000 series is our toughest contact centre headset yet. The GN 2000 Series is a straightforward, easy-to-use headset. It's available with either a special noise-cancelling microphone mounted on a flex boom arm or SoundTube equipped with a standard microphone. Experience crystal clear communications as the noise cancelling microphone reduces unwanted background noise – even in noisy offices.

Large ear cushions provide exceptional comfort thanks to fully gimballed mountings. That means our earpieces automatically adjust to the shape and angle of the ear. And less manual adjustment means you can concentrate on the call and not on the headset.

The GN 2000 Series ear cushions also provide better acoustical coupling, ensuring a rich incoming signal. What's more, this remarkable headset also features our PeakStop™ technology, which cuts off sudden loud noises above 118 dB SPL.

The GN 2000 is also available with a USB connector for dedicated IP applications. Moreover, the GN 2000 USB headset gives agents true stereo-quality sound. Complete with in-line sound controls, the GN 2000 USB is a true plug-and-play product that is Microsoft Windows® compliant.
